

JUNGHO PARK

Seattle, WA | 425-240-0407 | jungho.park@live.com | <https://www.linkedin.com/in/jungho-park-8527742a9/>

EDUCATION

University of Washington

Seattle, WA

Bachelor of Science in Computer Science; Minor in Business

Jun 2027

- GPA: 3.53 / 4.0
- Coursework: Data Structures & Algorithms, Natural Language Processing, Machine Learning, Software Engineering, Hardware-Software Interface, Software Design & Implementation, Linear Algebra

AWARDS

Battlecode Finalist | *MIT Battlecode Competition*

Jan 2026

- Developed an autonomous AI bot in Java to compete in a high-stakes Real-Time Strategy game.
- Optimized path-finding, resource management algorithms, and micro-combat.
- Placed 7th globally out of 600+ participating teams, successfully advancing to the 16-team finals.

Winner (T-Mobile Track) | *DubHacks '24*

Oct 2024

- Led a team of four engineers to build an AI-powered emergency response application integrated with IoT.
- Architected scalable AWS infrastructure using EC2 and Bedrock for foundation model deployment.
- Developed a full-stack React/TypeScript web application with live SMS messaging.
- Selected as the winner of the T-Mobile track among 1000+ participants.

EXPERIENCE

Amazon

Seattle, WA

Software Development Engineer Intern

Jun 2026 - Sep 2026

- Integrated APIs into an internal sandbox environment for the Stores FORCE team to expand testing capabilities.
- Added automated verification and mock data injection to dynamic calculation bindings to streamline evaluation.
- Implemented state history tracking and version rollback functionality for calculation bindings, improving system reliability and fault tolerance.
- Extended AI assistance capabilities inside the internal tool to simplify workflows and create shortcuts.

Briefcase

Seattle, WA

Undergraduate Research Assistant

Jan 2026 - Jun 2026

- Developed an AI-powered timeline feature to parse and analyze lengthy, flat-text court transcripts.
- Evaluated long-context methodologies including chunking, retrieval-augmented generation (RAG), and recursive summarization to address memory constraints.
- Built a custom evaluator tool for the timeline feature to prepare for final integration.
- Co-authored the discussion, ethical considerations, and future work sections for a team research poster.

PROJECTS

Changbal Innovation Hack | Web Speech API, OpenAI GPT-4/4o, JavaScript, HTML/CSS

Apr 2025

- Developed a real-time domestic violence threat detection system using speech recognition and AI-powered contextual analysis.
- Built a hybrid GPT-4/GPT-4o pipeline using knowledge distillation to enable large-scale sentiment inference.
- Designed a speech-to-text data pipeline converting audio into structured natural language inputs.

Multithreaded Web Server | C, C++

Mar 2025

- Engineered a multithreaded web server supporting 200+ concurrent requests using mutexes and spin locks.
- Implemented a consistent-hashing load balancer with custom file-locking, wait queues, and inode-based indexing.
- Designed an on-disk file system with paging, caching layers, and multi-index query support.
- Applied cryptographic defenses against XSS, directory traversal, and denial-of-service attacks.

Malloc Implementation | C

Aug 2024

- Implemented custom malloc, calloc, and realloc system calls using page-based free lists.
- Achieved over 90% memory utilization through optimized allocation and search strategies.
- Analyzed tradeoffs between throughput and fragmentation in allocator design.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, TypeScript, HTML/CSS

Technologies: React, Node.js, AWS, Tailwind, Microsoft 365

Developer Tools: Git, Docker, GitHub, VS Code, OpenAI APIs
